Overall injury risk to different drivers: combining exposure, frequency, and severity models

Young-Jun Kweon and Kara M. Kockelman

Abstract

Traffic crash risk assessments should incorporate appropriate exposure data. However, existing US nationwide crash data sets, the NASS General Estimates System (GES) and the Fatality Analysis Reporting System (FARS), do not contain information on driver or vehicle exposure. In order to obtain appropriate exposure data, this work estimates vehicle miles driven (VMD) by different drivers using the Nationwide Personal Transportation Survey (NPTS). These results are combined with annual crash rates and injury severity information from the GES for a comprehensive assessment of overall risk to different drivers across vehicle classes.

Data are distinguished by driver age, gender, vehicle type, crash type (rollover versus non-rollover), and injury severity. After correcting for drivers' crash exposure, results indicate that young drivers are far more crash prone than other drivers (per VMD) and that drivers of sports utility vehicles (SUVs) and pickups (PUs) are more likely to be involved in rollover crashes than those driving passenger cars. Although, the results suggest that drivers of SUVs are generally much less crash prone than drivers of passenger cars, the rollover propensity of SUVs and the severity of that crash type offset many of the incident benefits for SUV drivers.

Introduction: language and desire in theory and practice

Abstract

This introductory essay sets out to locate the topic of 'language and desire' in theory and empirical social science. It reviews various theoretical perspectives on desire and considers how their insights might be brought to bear on empirical investigations of the linguistic expression of desire in particular communities and cultures.

'Language and desire' is not an unfamiliar collocation for contemporary scholars in the humanities and social sciences. What it probably brings to mind, however, is not empirical studies undertaken by linguists or anthropologists, but the body of work known in shorthand as 'theory', whose canonical texts are written largely by philosophers and literary scholars, and mostly in French (cf. Barthes, 1978; Deleuze and Guattari, 1996; Kristeva, 1980; Lacan, 1998)—though as Alan Rumsey reminds us in his contribution to this volume, French poststructuralist thought about language and desire has important antecedents in the work of German-speaking theorists such as Hegel and (especially) Freud, since most discussions of language and desire take psychoanalytic theory as their point of departure. Within the 'theoretical' literature,
